

Multichannel telemetry & events on one device

Faster, more comprehensive clinical reports that make a difference for your patients:

- Urgent notifications and episode reports
- Daily Summary and End of Service reports
- Heart rate histogram on MCT report
- A-Fib onset and offset on MCT summary report
- AF burden and rate charts
- Full disclosure report on demand

Clarus 40M gives you single device Telemetry and Event Monitoring for complete and **responsive patient care**.

The compact, all-in-one Clarus 40M device offers patients comfort with superior data quality over 3 channels. It provides continuous detection and transmission of cardiac rhythm dysfunctions while patients continue with daily activities. Clarus 40M also allows patients to manually record events with an easy to use digital patient diary.

Built-in cellular means no more pairing with other devices and simpler day-to-day management for patients being monitored in long term cardiac studies.

Clinical benefits

All-in-one device

No need to pair to other devices or gateway for easier use and improved compliance.

Live data & alerts

Emergent event alerts at the time of events and hourly data uploads.

Real time analysis

Cardiac technicians monitor patient data for clinical review 24/7.

Multichannel

3-channel recording with chest & precordial leads for superior trace quality.

Zero data loss

Never lose data with Clarus wireless SIM – even if out of cellular range.

Patient benefits

Digital patient diary

Patients easily record and capture details when feeling symptomatic by simply pressing a button and following step-by-step on-screen instructions.

Charge while wearing

The device can be worn continuously without interruption to the study including during charging – with patients only required to remove the device while showering.

Easy to use

The Clarus 40M has an intuitive user interface with simple on-screen prompts to guide patients through device usage.
